This interface guides the user through the programming of the pump based on what pumpset is loaded into the device. The pumpset is identified using Magnetic Intelligent Set Type Identification Connector or MISTIC. Once the pumpset is identified, the Kangaroo Joey feeding pump will ask questions for that specific set. The ease of use for this feeding pump comes from the interface that is similar to an ATM. This interface guides the user through the programming of the pump based on what pumpset is loaded into the device. The pumpset is identified using Magnetic Intelligent Set Type Identification Connector or MISTIC. Once the pumpset is identified, the Kangaroo Joey feeding pump will ask questions for that specific set. This allows you to easily resume a previous feeding. The best part is that it can store your programs indefinitely. Also, the memory can store up to 72 hours of history. A rubber overmold gives the pump shock resistance and added durability. Noise is reduced as well, with the rubber overmold. Another great feature is its high IPX, or waterproof, score which makes cleaning easier because it can get a little wet. In addition to the safety and convenience features, you can lock the settings to prevent any tampering, purposeful and accidental, ensuring the correct amount of formula is pumped. Kangaroo offers other enteral feeding pump options, such as the ePump and the Connect. Below is a comparison chart of the top three Kangaroo Feeding Pumps. <http://cdosfera.rinethost.ru/userfiles/fj40-repair-manual.xml>

Kangaroo™ Joey Enteral Feeding Pump

EZ Mode Operation "Feed Only Set" Directions For Use

Battery Operation

Unplugging the pump from the AC line will automatically put the pump on battery power. To recharge the battery, plug the pump into an AC wall outlet. Pump will automatically begin charging.

General Instructions

1. Fill or spike feeding container prior to setting up pump.
2. Turn pump on – Press **Power** button in lower right-hand corner.
3. **In order to achieve proper accuracy, the fluid line in the feeding set bag must be 6 inches above the top of the feeding pump, when initiating the feeding cycle.**
4. Select ► **"Keep Settings"** or ► **"Clear Settings"** (for day to day use with the same feeding regimen the ► **"Keep Settings"** option should be selected).
5. Load the Feeding Set per diagram. **Do not overstretch the tubing.**

Priming the Pump

1. Press ► **"Prime Pump"** to access the pump priming options.
2. Press ► **"Auto Prime"** to automatically prime the pump set. The Pump will quickly prime the feed line and stop the formula before reaching the end of the line.
3. Press the ► **"Hold To Prime Feed"** menu selection to carry formula to end of tubing.
4. Press ► **"Done"**.

Setting the Feed Rate

1. Select ► **"Adjust Feed"** then ► **"Feed Rate"** use the buttons on the left to program the pump from 1 to 400 in increments of 1ml. Select ► **"Enter"** when desired rate is set.
2. Select ► **"Run"**. You will notice a small drop scroll down the screen when running.

Re-Priming the Pump After the Feed Bag Empties

1. A pump set bag that has been emptied will trigger the **Feed Error** screen. In this condition the pump set bag can be refilled to continue the feeding, but only after the pump set has been re-primed.
2. Disconnect the feeding line from the patient.
3. Refill the bag.
4. Press ► **"Continue"** to begin the pump Running.
5. Press ► **"Hold"**, then press ► **"Adjust Settings"**, then press ► **"Prime Pump"**.
6. Press ► **"Hold To Prime"** to prime the line. (Do Not Use Auto Prime)
7. Press ► **"Done"**, then select ► **"Run"**

To Change Rate or Clear Volume

1. Select ► **"Hold"**.
2. Select ► **"Clear Vol Fed"** to clear the volume.
3. Select ► **"Adjust Settings"** to adjust all settings.
4. Select ► **"Run"** to return to normal operations.

Pump sets should not be reused after 24 hours of initial usage.

Having a medical device that takes the stress out of one excellent option is the Kangaroo Pump, made by Cardinal Health formerly Covidien, which is well suited for home use and is often the setup and preparation. 2. Connect Battery Pack 3. Attach Pole Clamp 4. Press the Power Button on the Control Pad 5. Keep or Clear Settings 6. Open Pump Set Loading Area 7. Load Pump Set 8. Prime Pump 9. Set Feeding Mode and Parameters 10. Press Run Below is a quick reference user guide to get you started. The instructions for operating your Kangaroo Pump are straightforward and Kangaroo Feeding Pump Operating Manual. 1. Complete Initial You can choose to mount your Kangaroo feeding pump To start, plug in the pump using your power cord and When your battery runs down, leave Your brand new battery Make sure its always connected since it will provide reliable backup power if Kangaroo Pump to a vertical pole, usually an IV pole. This allows you to fasten All you have to do is Button on the Control Pad Look for the Once the language is set, you will If you ever do need to change the language, Once you've Area Open the pump set Next, make sure the valve is fully seated by pressing Then close the blue When you're finished, the bottom of the feed Or if you'd rather manually prime the This allows you to customize the You can also set flushing Auto Resume functionality. SimplifyPatients with anWith a bit of research, you can identify theOnce youve completed yourConnect pump, youll find it simple to set up and intuitive to use.If you have questionsYou can trust thePlease contact usCall us todayLouis, MO 63144 All Rights Reserved. Please upgrade your browser to improve your experience. Services vary across locations. Find services near you.In a letter from Cardinal Health, manufacturer of these products, they shared that Kangaroo Joey and ePump feeding bags are currently available in limited quantities and PHS expects to receive a small number of feeding bags each month. During this period, please follow the directions below to clean and reuse the feeding bag. Call PHS if you are unable to reuse a feeding bag. You can also find these instructions in PDF format here. Store pump and attached bag in refrigerator. Press prime button to flush water through feeding bag tubing into sink or empty container. Press prime button to flush water through feeding bag tubing into sink or empty container. Place bag in refrigerator between feedings. Go to PHSTIPS.com and click on Nutrition then on Bolus Feedings. Watch the videos on using a gravity feeding bag or a syringe to feed your child. We may be able to provide a different kind of food pump. You show this item as a rolling backorder but not why they are. Unless the company that makes the bags Covidien is no longer in business. Recently this excuse "Item Is On Backorder" is the government trying to control distribution. We have updated the blog to reflect that this was a past issue. The information was originally posted back in October. Thankfully we are no longer experiencing a shortage in bags. While the shortage is over, you can feel free to still use these tips in order to save on medical supply use. Have a great day! Thank you! Where are you getting your information from. Thank you We apologize for the confusion the original note in the blog caused.

We have updated the blog to better reflect the global impact and the solution we have in place. PHS has been able to mitigate concerns for many of our patient families by transitioning to a different feeding bag. Just ask the Veteran's Hospitals. They have run out in the last 2 weeks and are still backpedaling. I'd encourage you to work with your DME provider and come up with a plan that ensures you have access to the needed supplies. While I can't speak to your specific situation, we've

had success transitioning patients to a different type of bag. That could be a helpful conversation to have with your provider. Best of luck! I know of the 1000ml Joey and EJoey and 500ml Joey and EJoey and also the 500 and 1000ml Joey and EJoey Feed and Flush bags. These are all on manufacture back order with Cardinal. Cardinal is running at a 63% production rate right now. You can't tell patients that the back order is almost over when it is not. What are you going to suggest to your patients then In these cases, we understand if families do not want to change to an Infinity pump and would rather continue to order the feeding bags that work with the Kangaroo Joey pump. We will do our best to meet quantity requests. However, we may have difficulty keeping them in stock. If we run out of the bags, we will continue to do our best to obtain as many bags as we can. That being said, we suggest families plan for a continued backorder and reuse as many bags as they can. That is not the reality for all patients, but some can manage that. If you have questions on how to reuse your bags, please contact your PHS clinician or your DME provider. They will be able to help walk you through it. There are many others in the same boat. Thanks for your help. In these cases, we understand if families do not want to change to an Infinity pump and would rather continue to order the feeding bags that work with the Kangaroo Joey pump. We will do our best to meet quantity requests.

Kangaroo™ 924
Enteral Feeding Pump

Instructions for Use

General Programming Instructions:

Close roller clamp on pump set.

Fill or spike feeding bag prior to setting up pump.

Slowly open clamp and fill entire line with fluid, leaving a few drops in the drip chamber.

Close roller clamp.

Load set per arrow diagram on pump. (Do not over-stretch tubing.)

Press on and wait while a system check is performed.

Check "VOL CLR" light or press "VOL" then "VOL CLR" to clear volume, (if necessary).

Set feed rate using either increase/decrease buttons or turning side knob.

Optional Feature - Press "VTBD" button and set by either turning the knob or using the increase/decrease buttons. (Only use "VTBD" if you want to stop and alarm once a set amount of formula is delivered).

Open the roller clamp.

Press "Start/hold"

To change rate press "Start Hold" and set rate by pressing increase/decrease buttons on the front panel.

However, we may have difficulty keeping them in stock. If we run out of the bags, we will continue to do our best to obtain as many bags as we can. That being said, we suggest families plan for a continued backorder and reuse as many bags as they can. That is not the reality for all patients, but some can manage that. If you have questions on how to reuse your bags, please contact your PHS clinician or your DME provider. They will be able to help walk you through it. It appears that you need a new manufacturer. If the manufacturer, distributor. This sounds like a good opportunity for

some other company. You need to find another company rather than creating more work for the patients and their families. Also, washing the bags is not sanitary. Also, these bags are expensive. We don't have enough to make it till January. Is there another pump that will have feeding bag and flush bag. Or even spike bag and flush Ty Our team of PHS clinicians has had a lot of success with the Infinity pump and bags. We would recommend reaching out to your DME provider to see if that is something they offer and could help you to make the transition. Each individual's needs and use differ so rather than provide a guideline for how many days of use is appropriate, we advise you to replace the feeding bag if it looks dirty after thorough cleaning or if it no longer works with the food pump. This feeding pump is the first hydrating and ambulatory enteral device available. It assures clinicians of accurate and reliable function while providing patients with freedom and mobility. It functions on a simple to use ATM Style interface that makes it remarkably easy to use.

Features the safe enteral connection system New ambulatory-specific feed set design assists in ensuring proper setup and formula administration Easy to use power source allows the user to very easily plug and unplug it High waterproof rating IPX making it even easier to clean between uses Programmed in 17 languages, can be easily changed from one language to another Operating Manual Also available Kendall Kangaroo Joey Enteral Feeding Pump Accessories Code 383493 Kendall Kangaroo Joey Spike Set With Flush Bag Code 764669 Kendall Kangaroo Joey Safety Screw Spike Feeding Set Code 765555 Kendall Kangaroo Joey Proximal Spike Set Code 764655 Kendall Kangaroo Joey Pump Set Code 762055 More Information LockOut Feature Use the 232 2nd button down for 4 drips and then back to the 2nd button down for 2 drips to lock the settings on the pump. This feature locks the settings from being purposely or accidentally changed and can be unlocked by following the same steps. DEHP Free Pump Sets 100% DEHP Free and 100% phthalate free. This

ensures that your customers always use the safest and most environmentally friendly pump sets. AntiFree Flow Pump Sets All Kangaroo Joey enteral feeding pump Sets have an AFF Anti Free Flow device, this ensures the safest product for patients. It delivers very little nutrition while keeping the feeding tube patent. This feature allows the patient to receive a medication and then not have to remember to turn the pump on later. Pump Set Based Program Pump set based programming allows the Kangaroo Joey enteral feeding pump to be used in any setting. MISTIC Magnetic Intelligent Set Type Identification Connector identified the pumpset type and then asks questions only about that set. If a customer upgrades to a flushing platform they only have to change their pumpset without the hassle or cost of upgrading or adding equipment. Attitude Independent Cloudy drip chambers, crowded I.V.

<https://newhotelcolombia.com/images/98-honda-accord-online-manual.pdf>

, poles, wheel chairs, vertical backpacks do not impede the flow of formula with the Kangaroo Joey enteral feeding pump. It can truly be used anywhere on anyone. Attitude independence also makes Kangaroo Joey enteral feeding pump the ONLY ambulatory flush pump available. Thank you for using www.healthproductsforyou.com Close How long does a full charge last when not plugged in. Well try to get back to you shortly regarding this. If so what does it cover and how long does the coverage exist for. Are these pumps new or reconditioned. Please refer page no. 38 of below link for detailed warranty information. For any technical assistance please call manufacturers helpline numbers. You must have JavaScript enabled in your browser to utilize the functionality of this website. The smart feeding pump identifies the pump sets attached to it and guides users through the programming process specific to that set. The pump is lightweight and portable and its smooth functioning is not affected by any external factors. Hence, it is ideal to be used in hospitals, at home, or even while moving in a car or an ambulance. The pump uses a Magnetic Intelligent Set Type Identification Connector that is easily able to identify the type of pump set that is attached to it. After identification, the device displays programming instructions specific to the pump set attached. With a 72 hour memory bank, the Kangaroo Joey Enteral Feeding Device can store your custom feeding programs indefinitely for future use and reference. The lockout feature allows you to lock your program settings to prevent purposeful or accidental tampering in dosage. The most sought after feature of the pump is that it can be programmed for continuous or intermittent feeding. When set to intermittent feeding, the pump periodically delivers nutrition or medication to the patient as programmed. For added convenience, the program settings of the Covidien Joey Pump are available

in 15 different languages.

The overmold also sound proofs the pump and keeps the noise produced by it to an absolute minimum. The pump is also completely waterproof that makes it easy to clean between uses. This makes the Kangaroo Joey perfect when professional medical supplies are needed in the home.
